The major purpose of the book is to illustrate that triangular arbitrage in the foreign exchange market can be profitable. This idea is reinforced by the recent evolution of an independent cross market, and the remarkable developments in telecommunications. The book illustrates how a dealer of Foreign Exchange can apply the "buy low and sell high" rule without taking any risk. The keys to avoid the risk are speed and precision. All the procedures are computerized so that speed and precision problems that are inherent in manual trading are now solved.

As Ignazio Visco, Governor of the Bank of Italy, says in his Foreword, all economic policy makers today need to re-examine our history to help them confront the challenges of today. This edited volume focuses specifically on the theme of financial innovation and how financial resiliency was achieved in Naples. To highlight both the achievements of the public banks of Naples and their lessons for financial resiliency, the book focuses on financial crises and how they were overcome in Naples in contrast to other European financial systems. The first section focuses on the development of the public banks unique to Naples. The second section compares those with other banking systems and how they responded to the same shock in 1622, caused by the full mobilization of European belligerents to finance their efforts in the Thirty Years War. The next section compares lessons learned in the rest of Europe over the next century and a half. The final section comes back to original start of the narrative arc to suggest ways that today's policymakers and thinkers could use the historical experience of the public banks of Naples to deal better with the ongoing problems stemming from the financial crisis of 2007-08.

A Guide for Health Care Professionals Springer

In reconstructing the birth and development of the notion of 'unconscious', historians of ideas have heavily relied on the Freudian concept of Unbewussten, retroactively projecting the psychoanalytic unconscious over a constellation of diverse cultural experiences taking place in the eighteenth and nineteenth centuries between France and Germany. Archaeology of the Unconscious aims to challenge this perspective by adopting an unusual and thought-provoking viewpoint as the one offered by the Italian case from the 1770s to the immediate aftermath of WWI, when Italo Svevo's *La coscienza di Zeno* provides Italy with the first example of a 'psychoanalytic novel'. Italy's vibrant culture of the long nineteenth century, characterised by the sedimentation, circulation, intersection, and synergy of different cultural, philosophical, and literary traditions, proves itself to be a privileged object of inquiry for an archaeological study of the unconscious; a study whose object is not the alleged 'origin' of a pre-made theoretical construct, but rather the stratifications by which that specific construct was assembled. In line with Michel Foucault's *Archéologie du savoir* (1969), this volume will analyze the formation and the circulation, across different authors and texts, of a network of ideas and discourses on interconnected themes, including dreams, memory, recollection, desire, imagination, fantasy, madness, creativity, inspiration, magnetism, and somnambulism.

Alongside questioning pre-given narratives of the 'history of the unconscious', this book will employ the Italian 'difference' as a powerful perspective from whence to address the undeveloped potentialities of the pre-Freudian unconscious, beyond uniquely psychoanalytical viewpoints.

Economic growth and the creation of wealth have cut global poverty rates, yet vulnerability, inequality, exclusion and violence have escalated within and across societies throughout the world. Unsustainable patterns of economic production and consumption promote global warming, environmental degradation and an upsurge in natural disasters. Moreover, while we have strengthened international human rights frameworks over the past several decades, implementing and protecting these norms remains a challenge. These changes signal the emergence of a new global context for learning that has vital implications for education. Rethinking the purpose of education and the organization of learning has never been more urgent. This book is inspired by a humanistic vision of education and development, based on respect for life and human dignity, equal rights, social justice, cultural diversity, international solidarity and shared responsibility for a sustainable future.
