Stepping-stones to improve upon functioning of participatory agricultural extension programs ILRI (aka ILCA and ILRAD)

Agricultural transformation and development are critical to the livelihoods of more than a billion small-scale farmers and other rural people in developing countries. Extension and advisory services play an important role in such transformation and can assist farmers with advice and information, brokering and facilitating innovations and relationships, and dealing with risks and

disasters. *Agricultural Extension: Global Status and Performance in Selected Countries* provides a global overview of agricultural extension and advisory services, assesses and compares extension systems at the national and regional levels, examines the performance of extension approaches in a selected set of country cases, and shares lessons and policy insights. Drawing on both primary and secondary data, the book contributes to the literature on extension by applying a common and comprehensive framework — the “best-fit” approach — to assessments of extension systems, which allows for comparison across cases and geographies. Insights from the research support reforms — in governance, capacity, management, and advisory methods — to improve outcomes, enhance financial sustainability, and achieve greater scale. Agricultural Extension should be a valuable resource for policymakers, extension practitioners, and others concerned with agricultural development.

Resources in Education Arihant Publications India limited

This publication contains twelve modules which cover a selection of major reform measures in agricultural extension being promulgated and implemented internationally, such as linking farmers to markets, making advisory services more demand-driven, promoting pluralistic advisory systems, and enhancing the role of advisory services within agricultural innovation systems. The reform issues consider the changing roles of the various public, private and non-governmental providers, and highlights the collaboration required to create synergies for more efficient and effective high quality services responding to the needs and demands of smallholder farmers. The modules draw on reform experiences worldwide and provide an introduction, definitions and a discussion for each specific reform measure, as well as case studies, tools, exercises and a reference list. The reform topics are envisaged for policy-makers, management and senior staff of institutions providing agricultural and rural advisory services. It can also be very useful for students studying agriculture, rural development, and extension in particular. This is a substantially updated version of the 2009 publication of the same title, but with only nine modules. These nine modules were restructured and up-dated, and three modules were added. The layout of the modules changed to allow a better overview for the reader.

Guide to Extension Training Wageningen Academic Publishers

The Farmer Field School (FFS) originated in the 1980s in the context of integrated pest management in Indonesian rice farming. With the hope that it is the remedy for agricultural extension system, FFS has been promoted as a tool for participatory learning and experimentation all over the world. This work results from a critical analysis of the introduction of the FFS concept into the agricultural innovation system in Uganda. Ideally, an FFS produces new technical knowledge in the context of application through the input of local human resources. The analysis, framed as a technography, shows that implementation and operation of an FFS is hugely complex. This detailed study of institutional factors, from the level of international donor organizations down to the level of local leadership and gender relations, and analysis of technical factors in different rural areas of Uganda makes clear that and FFS is more than a local tool for farmer participation in agricultural improvement. Implementation of a FFS requires adjustment of the agricultural

innovation system at all levels and an integrated tackling of agricultural problems in order to meet its objectives. Isubikalulu shows that it is imperative to 'demolish' existing organizational structures and create new ones, which align scientific with local structures to produce an appropriate people-centered system that is more responsive to agricultural and rural development. She provides stepping stones in redesigning FFS to fit the specific conditions in Uganda.
